

EYE-TRACKING STUDY

Researchers at NASA Ames Research Center are looking for volunteers who have mild to moderate traumatic brain injuries, glaucoma or retinitis pigmentosa, or idiopathic elevated intracranial pressure willing to participate in a study on the use of a NASA-developed, non-invasive technology to detect and characterize neural impairment. Participants must be able to look at and track small moving targets on a television screen during this 15-minute test.

REQUIREMENTS

- must be between the ages of 18-60 years old.
- must currently be able to make their medical decisions and sign medical informed consent forms on their own.
- must be able to sit still for 20 minutes, fixate well for several seconds at a time, and follow a moving target with their eyes while keeping their head still.
- must be able to sit, stand, and walk without assistance.

The total duration of the study is about 1 hour and you will be compensated with \$100 for your time, inconvenience, and travel. Participants may request a copy of their results for their own records.

For more information about this study, or if you are interested in participating, please contact Lily Wong at (650)604-1446 (email: lily.r.wong@nasa.gov) or Dr. Dorion Liston at (650)604-4065 (email: dliston@arc.nasa.gov).
